

Founded as Aspirus St. Luke's – Duluth's first hospital – nearly 150 years ago, we are deeply invested in the communities we serve.

The Challenge

St. Luke's Hospital in Duluth was continuing its multi-year effort to modernize and improve patient spaces throughout its facility. The third and fourth floors were next in line for window replacement, requiring careful demolition and installation in an active healthcare environment. The challenge was to complete the work efficiently, safely, and with minimal disruption to hospital operations.

The Solution

St. Germain's Glass handled the full scope of work—demolition, supply, and installation of all windows on the third and fourth floors. Building on our experience from previous phases of the hospital's renovations, we coordinated closely with facility teams to ensure smooth scheduling and safe execution. Our team delivered high-performance glazing systems that improved energy efficiency, comfort, and aesthetics, while maintaining the hospital's operational integrity.

Results Accomplished

The new windows brought immediate improvements to patient rooms and staff areas, enhancing natural light and thermal performance. With the third and fourth floors now complete, St. Luke's continues to benefit from a consistent, modern look across its facility. Our work was completed on time and with the same level of care and precision that has defined our long-standing relationship with the hospital.

Why was St. Germain's Glass best suited for this project?

St. Germain's Glass has been a trusted partner to St. Luke's for years, and this phase of the renovation was no exception. Our deep familiarity with the building, combined with our commitment to craftsmanship and care, made us the ideal choice. Backed by the Brin family of companies, we brought not only glazing expertise but the reliability and pride that come from serving our local healthcare community.
