

For more than 80 years, Journey Christian Church has offered Good News to hurting people, in the Cloquet area.

The Challenge

The GC needed a reliable glazing and storefront partner who could seamlessly integrate into the project team and deliver interior and exterior storefront (vestibule) framing, automated entrances, and glazing on a tight construction schedule. With multiple trades coordinating on-site and Minnesota weather impacting timelines, the GC required a subcontractor who could communicate clearly, and adapt quickly.

The Solution

St. Germain's Glass worked closely with the GC from planning through installation, providing interior and exterior storefront framing, automated entrance systems, and glazing that aligned with the project schedule and overall build strategy. Our in-house service department supported the automated entrances, allowing the GC to rely on one accountable partner for installation, coordination, and long-term service support.

Results Accomplished

Through proactive coordination and consistent communication, St. Germain's Glass helped the GC maintain momentum and minimize punch-list items while delivering a polished entry system for Journey Church in Cloquet. The completed vestibule and automated entrances met performance, accessibility, and durability expectations, supporting a smooth project closeout.

Why was St. Germain's Glass best suited for this project?

The GC selected St. Germain's Glass for our ability to manage storefront framing, glazing, and automated entrances under one roof, supported by a responsive service department and proven specialists. Our relationship-driven approach, local accountability, and backing from the Brin family of companies made us a trusted partner throughout the project.
