

The Two Harbors City Hall, located in Two Harbors, MN, provides municipal services for residents of Two Harbors.

The Challenge

The project required interior and exterior storefront (vestibule) framing, automated entrances, and glazing that balanced durability, accessibility, and security. In addition to high-traffic entry systems, the scope included a bullet-resistant transaction window that demanded precise installation and strict attention to safety, performance, and code requirements.

The Solution

St. Germain's Glass delivered complete interior and exterior storefront framing, automated entrance systems, and glazing, utilizing our service department to support the automatic doors. Our dedicated and factory-trained automatic door specialist, ensured the automatics were properly installed, tested, and commissioned, while our glazing teams carefully installed the bullet-resistant transaction window to meet security and performance standards.

Results Accomplished

The completed vestibule, automated entrances, and glazing systems provided a secure, functional, and polished finished product built for daily use. The bullet-resistant transaction window enhanced safety without sacrificing visibility or aesthetics, while the automated entrances delivered reliable, accessible performance.

Why was St. Germain's Glass best suited for this project?

St. Germain's was uniquely suited for this project because it required a fully integrated approach—combining storefront framing, glazing, automated entrances, and high-security elements without room for error. Our team ensured every component was installed, tested, and commissioned to perform from day one. Backed by a dedicated service department, we deliver not just installation—but long-term reliability and accountability.
